

| LIGHT – Knowledge Organiser Year 6 Spring 2 | | | |
|---|---|--|--|
| Vocabulary | | Properties of Light | Refraction & Spectrum of Light |
| light | A type of energy. It stimulates our eye to send signals to the brain so that we can see. | <ol style="list-style-type: none"> Light appears to travel in straight lines.  Light travels very fast!  300,000,000 metres per second! When blocked, it creates a  | <p>White light can be refracted through a prism to split it into its different colours (spectrum):</p>  <p>The spectrum of white light is RED, ORANGE, YELLOW, GREEN, BLUE, INDIGO and VIOLET.</p> |
| light source | The origin of light (where light comes from). Can be natural or artificial. | | |
| ray | The straight path with which light travels. | | |
| reflect | When light bounces off an object without being absorbed. [Noun = reflection]. | <h3>How We See</h3> <p>We can see objects because they give out light or reflect light into our eyes.</p>   | <h3>Shadows</h3> <p>Shadows have the same shape as the objects that cast them:</p>  <p>Shadows change length and direction during the day:</p>  <p>Shadows change in size depending on the distance between the object and light source:</p>  <p>If the source is moved closer the shadow gets BIGGER</p> |
| refract | When light changes direction as it passes through one material into another. [noun = refraction]. | | |
| emit | To produce and give off/out a type of energy (e.g., light or sound). | <p>Red, Orange, Yellow, Green, Blue, Indigo, Violet</p> | |
| transparent | Allows all light to pass through. | | |
| translucent | Allows some light to pass through. Objects on the other side of a translucent object cannot be seen clearly. | | |
| opaque | Not able to allow any light to pass through. | | |
| periscope | A piece of equipment using two mirrors set at 45°. It enables us to view objects which would be out of sight. | | |
| spectrum | A range of colours produced by separating out white light (as seen in a rainbow). | | |
